

## **Error when installing MIS**

If you receive an 'internal error 2908' or 'error 1395 HRESULT 0x800280F' when trying to install MIS and it then uninstalls it and displays 'FATAL ERROR' then you will need to verify the DotNet Framework on the pc.

The MIS requires Microsoft DotNet Framework version 2.0 or later. The error codes you are seeing (2908 and 1395) are related to this Microsoft product. Please verify the DotNet Framework on the computer in question, and download the latest version for the OS from the Microsoft web site.
